### Notes

NA - Not Available

NR - Not nationally reportable

CRS: Congenital Rubella Syndrome

Prior to 1966, hepatitis A and B were not separated from other types of hepatitis. Prior to 1978, deaths from hepatitis A and B were not separated from deaths from other types of hepatitis.

Haemophilus (Hi) reporting includes all serotypes and all ages. In 2003, 32 cases of invasive Hi type B disease were reported among children <5 years of age.

Varicella was removed from the nationally notifiable disease list in 1991. In 2003, varicella cases were reported from 21 states, the District of Columbia, Guam, Puerto Rico and American Samoa.

\*Previously reported as measles-containing vaccine (MCV).

**Var:** varicella vaccine

**Combined 4-3-1:** Four or more doses of DTP/DTaP/DT, three or more doses of poliovirus vaccine, and one or more doses of any measles-containing vaccine.

**Combined 4-3-1-3:** Four or more doses of DTP/DTaP/DT, three or more doses of poliovirus vaccine, one or more doses of any measles-containing vaccine, and three or more doses of *Haemophilus influenzae* type b vaccine.

Data prior to 1993 were collected by the National Health Interview Survey and represent 2-year-old children. Data from 1993 are from the National Immunization Survey and represent 19-35 month-old children. Different methods were used for the two surveys. No national coverage data were collected in 1986-1990.

Most recent publication: CDC. National, State, and Urban Area Vaccination Coverage Levels Among Children Aged 19-35 Months – United States, 2004. MMWR 2004;54(29):717-721.
